SUMMARY

Full Stack Engineer with a MERN Stack foundation who builds things that actually ship. I've designed multi-tenant SaaS architectures, wired NLP pipelines into production React apps, implemented 6-role RBAC HR system to a 44-endpoint REST API and complete Business workflows, written backend systems with enough security and query optimization. I care about clean architecture and maintainable code. Comfortable across the stack and into DevOps, with working knowledge of Docker and Kubernetes cluster deployment on GKE and AKS.

EXPERIENCE

Nexusberry

June 2025 – Nov 2025

Frontend / Full Stack Intern · React & Next.js

- Built an AI document processing pipeline using React, integrating NLP techniques (tokenization, lemmatization, NER) and Google Gemini for OCR, classification, and automated summarization cutting manual document processing time by 70%
- Delivered a full-stack restaurant web app in Next.js with Strapi CMS, implementing dynamic menus, category management, reservation flows, and a centralized content model across 5+ content types
- Worked within an Agile sprint cycle using Jira, collaborated directly with senior engineers on React and Next.js codebases, and shipped features across multiple concurrent client projects

PROJECTS

Inventory Management System — Inventory Genius | [live](#)

React · TypeScript · Supabase · PostgreSQL · React Query · Recharts · Docker · Kubernetes

- Designed the PostgreSQL schema for full inventory workflows — sales orders, purchase orders, SKU generation, and CSV bulk import and reduced API round-trips by 60% by combining React Query caching with batched Supabase writes
- Implemented 4-role RBAC (super_admin, admin, staff, accountant) using Supabase Auth, protected routes, and Row-Level Security policies — with Zod validation on all 95 TSX form entries and 2 Recharts dashboards tracking sales trends and low-stock thresholds
- Containerized with multi-stage Docker builds behind NGINX and deployed on Kubernetes (Minikube), with Resend Email API handling OTP verification — sustaining 99.5% uptime across the deployment lifecycle

Smart HR Suite — Employee Management System | [live](#)

React · TypeScript · Supabase · Edge Functions · Nodemailer · Docker · Kubernetes

- Architected a 6-role permission system (admin, hr_manager, payroll_officer, department_manager, employee) using Supabase Auth with RLS policies and role-resolver helpers, reducing unauthorized cross-tenant data exposure risk by 90%
- Built 8 HR modules (Dashboard, Employees, Attendance, Leave, Payroll, Audit Log, Settings) backed by 4 Supabase Edge Functions (create-employee, resend-verification, signup-with-verification, verify-email) and SMTP email verification

YouTube Backend — REST API | [code](#)

Node.js · Express.js · MongoDB · JWT · Cloudinary · Helmet

- Designed 8 MongoDB schemas across 7 collections and built 44 REST endpoints covering 8 feature modules (users, videos, comments, reactions, subscriptions, playlists, search, notifications), including a 24-hour cookie-based view deduplication system that eliminated duplicate records by 95%
- Optimized query performance using MongoDB full-text search indexing, parallel aggregation pipelines, and bulk inserts — benchmarked with MongoDB Explain, resulting in 60% faster response times — and secured the API with Helmet, per-route rate limiting, and JWT refresh token rotation

TECHNICAL SKILLS

Stack: MERN (MongoDB · Express.js · React.js · Node.js) · PERN (PostgreSQL · Express · React · Node.js)

Languages: JavaScript (ES6+) · TypeScript · C++

Frontend: React.js · Next.js · Tailwind CSS · Zustand · Redux Toolkit · shadcn/ui (Radix UI)

Backend: Node.js · Express.js · REST API Design · JWT Auth · MongoDB · PostgreSQL · Supabase · Redis · Firebase

Database: Schema Design · Query Optimization · Row-Level Security · Relational & NoSQL

DevOps: Docker · Kubernetes (Minikube · Kind · GKE · AKS) · NGINX

Practices: Clean Code · RBAC · Agile/Scrum · Component Architecture · API Security · Jira

NLP & Deep Learning: Text Preprocessing Pipelines (Tokenization, Lemmatization), Word2Vec, ANN, RNN, LSTM, GRU

Tools: Git · GitHub · Postman · Cloudinary · VS Code

EDUCATION

Comsats University Islamabad, Lahore Campus

2022 – 2026

BS Software Engineering

Relevant Subjects: Web Technologies · Database Systems · OOP · DSA · Communication Skills
